

NIST CSF 2.0 Control Mapping

Mapping of Helios Azure governance activities to NIST Cybersecurity Framework functions.

Overview

This document maps the Helios Azure governance project to NIST CSF 2.0 functions. It demonstrates how cloud governance, monitoring and evidence management support security outcomes.

Mapping Table

NIST CSF Function	Helios Example	Evidence / Output
Govern	Azure Policy initiative defining baseline guardrails	Policy assignment screenshot
Identify	Resource inventory and Owner tag checks	Resource Graph missing tags query
Protect	Storage public access and region restrictions	Storage query / allowed locations policy
Detect	Workbook dashboards and scheduled checks	Azure Workbook / Function App evidence
Respond	Risk register and remediation recommendations	Risk register and risk summary
Recover	Future enhancement: recovery testing and restoration evidence	Planned enhancement

Summary

The project primarily demonstrates Govern, Identify, Protect and Detect capabilities. Respond and Recover can be extended in future phases through incident playbooks, ticketing and recovery testing.

Prepared as part of the Helios Azure Cloud Governance & GRC portfolio case study.
